

CLUTCHTECH

TSB-243 Clutch Pedal Over Centre Spring

The Focus MK3 Focus RS and Focus ST250 are equipped with a clutch pedal over centre spring on the pedal assembly under the dash. This spring can be removed to change the clutch pedal feel if the driver desires.

The spring can be removed by just prying the spring seat off the pedal with a flat head screw driver.

Effects of spring removal:

- Slightly increased operational effort
- More consistent pedal pressure through pedal motion
- Increased driver control at friction modulation point
