

CLUTCHTECH

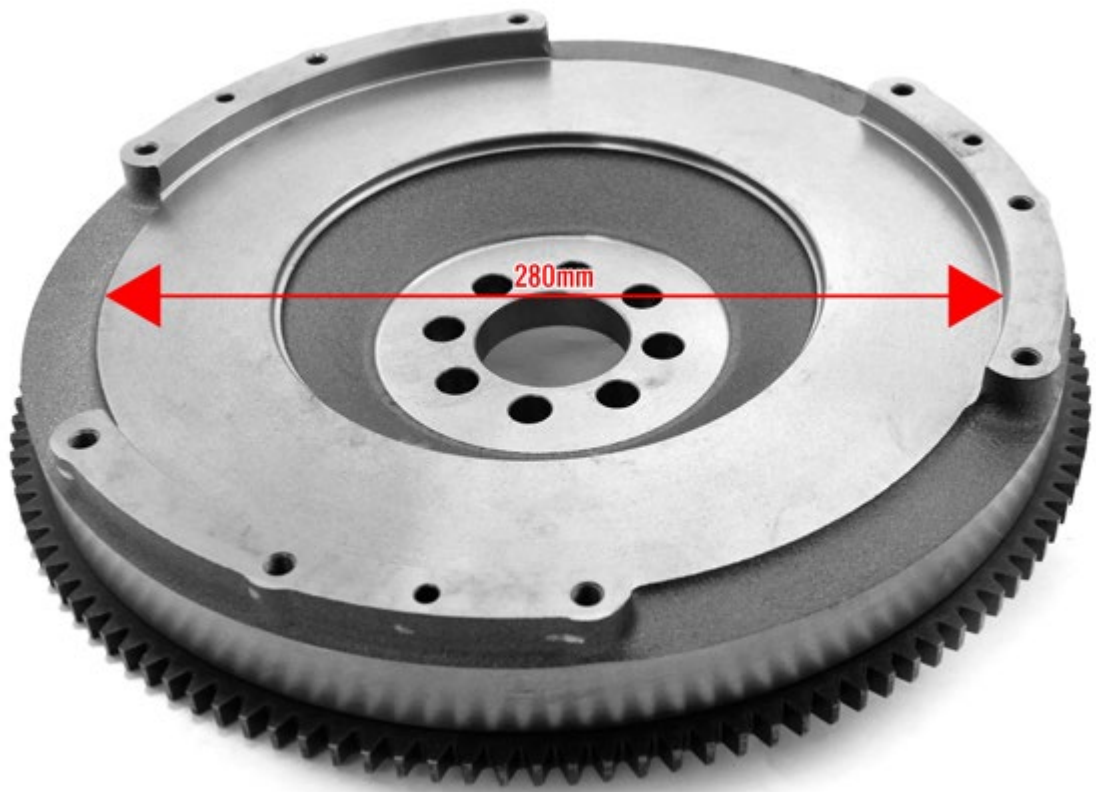

TSB-GM260 In Relation to Clutch Kit Part No. KGM26010-1A

This Xtreme Outback performance clutch kit is an upgrade from the original 260mm friction diameter to a larger 275mm friction diameter.

In order to correctly install this performance clutch kit, the inner diameter of the flywheel must be machined to 280mm to clear the larger pressure plate and friction disc.

Failure to bore this diameter out may cause fitment issues and void warranty.
