TSB-SMF02 Single Mass Flywheel Conversions

PLEASE READ BEFORE INSTALLATION AND ADVISE VEHICLE OWNER.

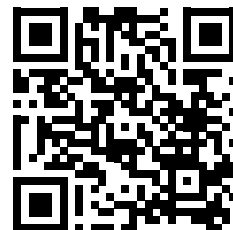

When fitting a single mass flywheel (SMF) conversion to some vehicles, there may be an increase in transferred harmonic noises from the engine to the gearbox. This may present itself as increased rollover noise from the gearbox at idle or increased harmonics in labouring conditions. These transmitted noises do not effect the performance of the clutch or vehicle. While every effort is made to reduce these harmonics by design, in some cases additional harmonics are unavoidable.

Please note that these noises are not a warrantable issue.
