

pMaxKote™

Protect Your Build

King's factory applied nano-composite polymer coating is a revolutionary approach to coated bearings. It improves wear resistance and protects bearings during periods of marginal lubrication. pMaxKote™ contains ceramic nano-composite particles and solid lubricant. It functions as a fourth layer over the pMaxBlack™ trimetal bearing structure without changing the original wall thickness dimensions.

pMaxKote™ benefits:

- Superior seizure resistance
- Superior cavitation resistance
- Superior wear resistance
- Superior protection against oil starvation
- No added wall thickness

pMaxKote™

Application Guide
